

Easi-Walker Sample Data

Included with this release of the Easi-Walker software is some sample data. This is real data collected by pedometers and so shows some days without any step data and some days with a lot of data. It is intended to help you become familiar with the using the software.

Installation

1. Install the Easi-Walker software. If the CD does not auto-run, then you can run **setup.exe** manually
2. Access the Teacher's menu of the application software by pressing <Ctrl-T>
3. If required, you can change the location of your step data database
4. Note down the location of the step data database
5. Exit the Easi-Walker application software
6. Extract the **EWSample.zip** file to the same location as noted in the Teacher's menu in step 4
7. Restart the Easi-Walker application software
8. Press the ◀ next to the date, to go back to last date with some data in

9. You will now be able to browse several dates and see data from a number of pedometers
